

NovaSimpli – access control made simple

NovaSimpli – the simple, smart and secure

NovaSimpli is the small building access control system with all the functionality and sophistication you would normally associate with a bigger system. It can monitor up to two or four doors and up to 50 users, making it ideal for homes, apartment blocks, small businesses and more.

SECURE WITH NOVASIMPLI

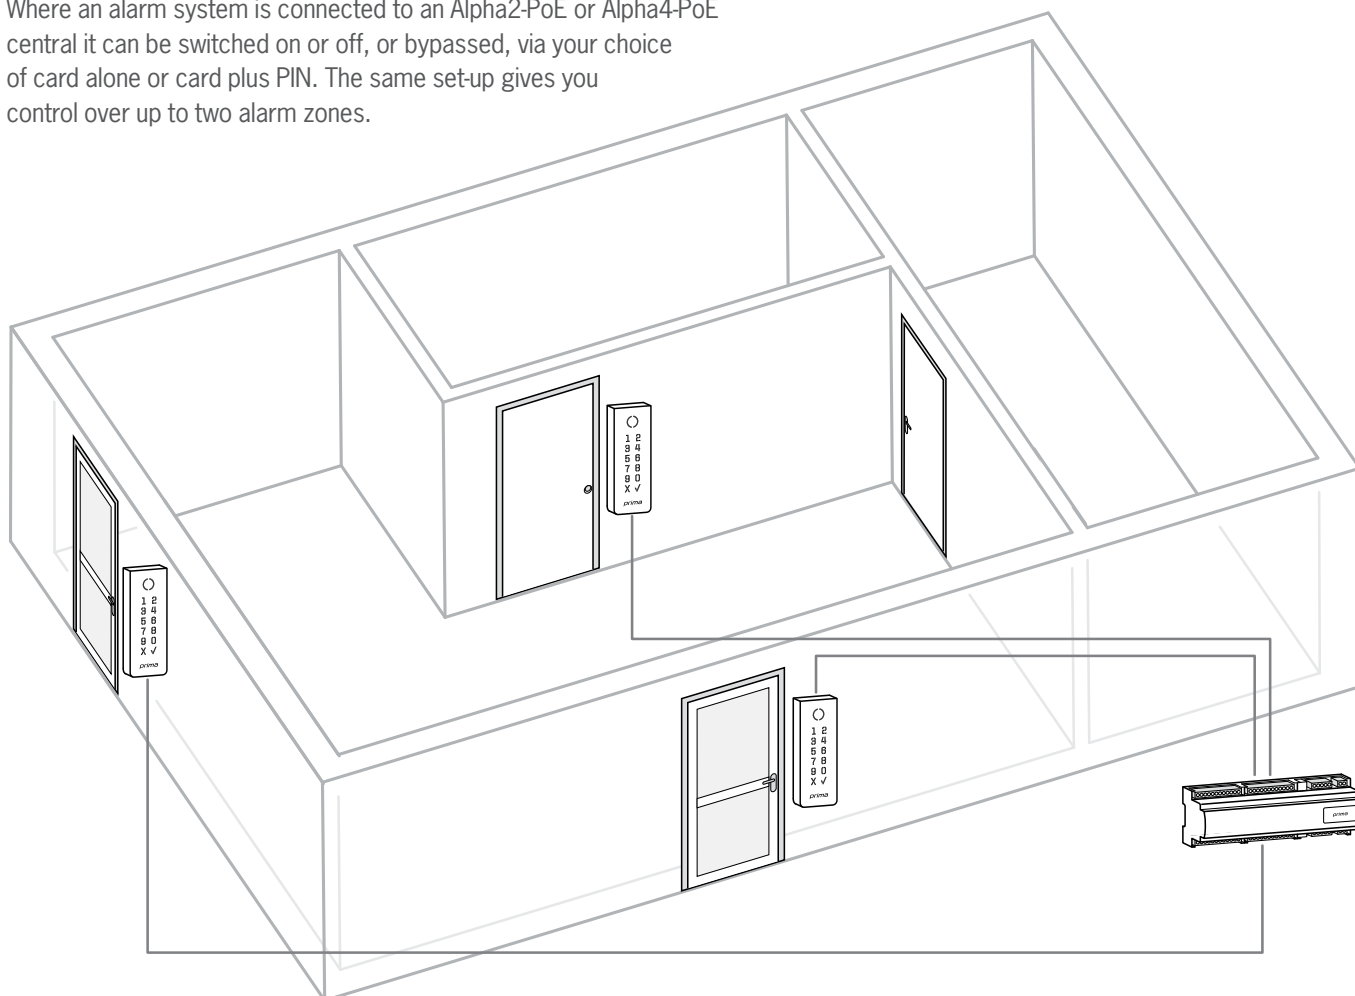

Above all, NovaSimpli has been designed to make your life simple. It doesn't need a server – you can run it from your desk- or laptop. It doesn't use desktop readers – tags are authorised by typing the tab number into the software. Our system is almost infinitely upgradeable. You never have to throw away the old one – should you find that you need something bigger, NovaSimpli can easily be expanded with more elements and upgraded software.

NovaSimpli consists of an Alpha central, Nexus readers and NovaSimpli software, which is included in on all centrals. Depending on the central selected your system can include alarm control and PoE (power over Ethernet) power supply, giving you maximum flexibility. The software is intuitive to use, as is setting up new users and controlling which doors they each have access to.

Where an alarm system is connected to an Alpha2-PoE or Alpha4-PoE central it can be switched on or off, or bypassed, via your choice of card alone or card plus PIN. The same set-up gives you control over up to two alarm zones.

- NovaSimpli perfect for homes and small businesses
- NovaSimpli monitor via your laptop or web browser
- NovaSimpli upgrade by adding more elements

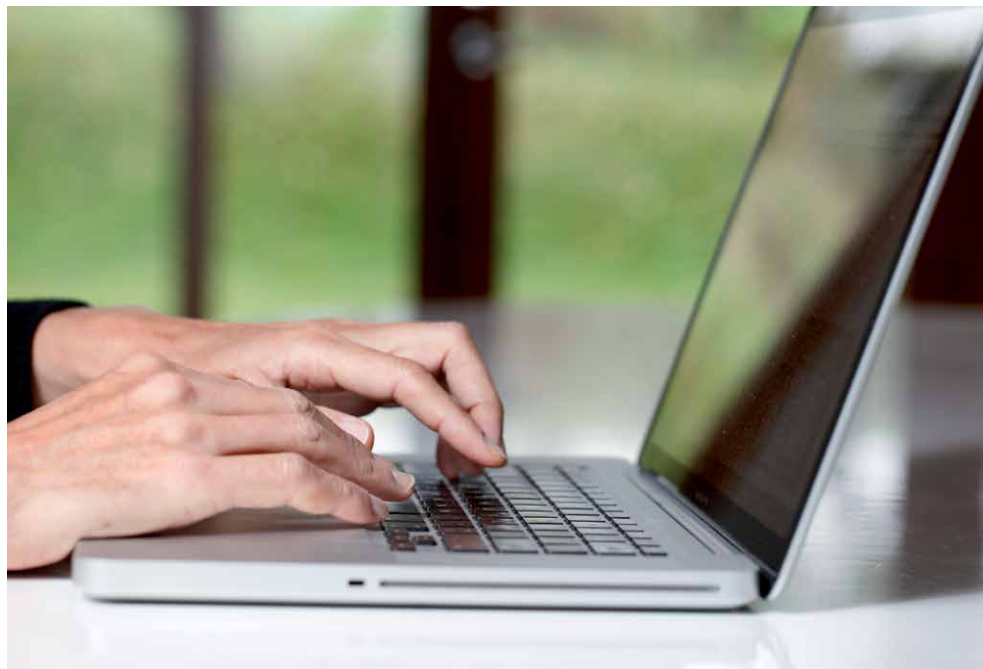

Secure access control system

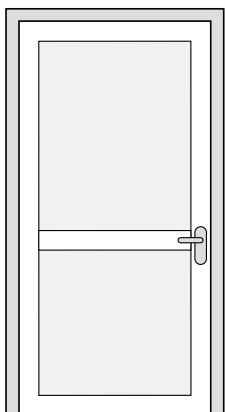

NO MORE DESKTOP READERS

With NovaSimpli you don't need a desktop reader to register a tag. Just type the number printed on the tag into the system and it's registered! The tag's then ready to be issued and used to open any combination of doors as defined by you.

Just type the tag number into the system and it's registered

The user can immediately open controlled doors

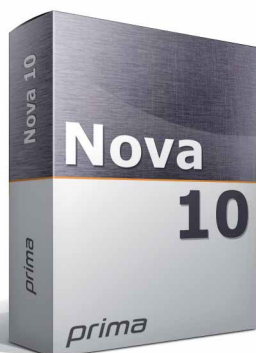

NOVASIMPLI UPGRADE

Install NovaSimpli safe in the knowledge that you will never outgrow it.

Need to extend your building, or to install or secure more doors? No problem. Both central and readers' firmware can be infinitely upgraded following installation. Choose the software to match your new configuration from our suite of Nova access control programs and your system can expand with your business.

The next step up from NovaSimpli is Nova10, capable of managing up to 10 online or offline doors and 100 users. Nova10 also includes far greater functionality, allowing you to use a toggle function or keep the doors open for certain time intervals, for example. This makes it the ideal solution for medium-size businesses and housing associations.

Future-proof your access control systems by choosing from the Prima range today.

Extra Alpha centrals and online Nexus readers can be added to the system with a software upgrade.

The same goes for offline battery-driven electronic SensoLock® cylinders and EvoLock® doorhandles. These types of readers need no cabling.
