

Alpha Parking and traffic light controller

– The smart solution for all types of parking facilities

A complete solution for parking facilities

Prima's Alpha Parking controller is a stand-alone central, which is designed to control the in- and outgoing traffic in parking facilities. Both in small and large parking facilities, it can be beneficial to add the Alpha parking controller to the system, as this allows for easy administration of entrance to the parking area with controlled traffic lights, unique access tags/cards and remote control.

Advantages with Alpha Parking controller:

- A complete access control system comprised of software and parking guidance in one and the same system
- Different traffic situations and reader types offer the possibility to add several different functions to the system such as; traffic lights, readers, gates and vehicle detectors next to entrance and exit points
- It is possible to integrate software solutions such as; presence, anti-pass back, ticket system etc.
- The controller can operate a maximum of 4 traffic lights / 4 gates in one single installation
- The administration is made simple and easy via the Nova software, where the different components as well as users and their access rights are administrated
