EIS-R

1. FOR YOUR SAFETY

SWITCH ON SAFELY

Do not switch the unit on when use of a wireless phone is prohibited or when it may cause interference or danger.

INTERFERENCE

All wireless phones and units may be susceptible to interference, which could affect performance. Follow any restrictions. Switch the unit off near medical equipment.

SWITCH OFF IN AIRCRAFT

Follow any restrictions. Wireless devices can cause interference in aircraft.

SWITCH OFF WHEN REFUELING

Do not use the unit at a refueling point. Do not use near fuel or chemicals.

SWITCH OFF NEAR BLASTING

Follow any restrictions. Do not use the unit where blasting is in progress.

USE SENSIBLY

Use only in the normal position as explained in the product documentation. Do not touch the antenna unnecessarily.

EIS-R

2. INTRODUCTION

EIS-R (EIS) is a simple GSM intercom communication system designed to be a low-cost, reliable, single box solution for intercom application that is simple to install, and simple to use,

It is designed for unlimited range, wire-free GSM intercom, pin code access, caller ID control and Wiegand access support.

3. EIS-R FEATURES AND APPLICATIONS

Key Features

- Built-in 5 band GSM module
- 1 intercom call button (supports 5 numbers)
- Caller ID numbers control (up-to 1000 caller ID numbers) Up to 100 temporary SPIN access codes
- Up to 1000 PIN access codes
- 2 x Input Wiegand receiver
- 2 outputs (relay supported)

Programming Options

- Programming by Web server

Typical Applications

- Single box, wire free intercom solution
- Remote gate opener – Caller ID number recognition
- Simple (Wiegand) access system

EIS-R

4. START UP

EIS unit accepts a micro 4G GSM Sim card provided with the unit.

VERY IMPORTANT

Use ONLY the Micro SIM card provided with the EIS-R. No other SIM cards are supported

- Connect power cable to EIS unit (YOU MUST POWER THE EIS UNIT WITH THE POWER SUPPLY INCLUDED). Do not power with any other power supply.
- Power up the unit.
- Wait until LED1 (Blue) starts flashing. This is set in around 30 – 45 seconds.
- EIS unit is now ready to operate.

NOTE

EIS device will “beep” in 15s interval until the device is not in normal operation.

5. LED INDICATION

Blue LED (LED1)

- Indicates the level of the GSM signal from 1 to 5 LED flashes (1 is weak signal, 5 is excellent signal)

Red LED (LED2)

- GSM module Activity

Yellow LED (LED3)

- Short flashing indicates that the GSM module is ON, but it is not yet connected on the GSM network. After connection, yellow led is flashing with short pulse (1/2s) ON and a long pulse (5s) OFF .

EIS-R

6. CONNECTION DIAGRAM

Before connecting the EIS-R, please take a look at connection diagram.

Figure 1: EIS-R: Connection diagram

IMPORTANT

DO NOT USE Power out (12V AUX) to power electric locks! Use a separate power source for electric door locks!

EIS-R

7. EIS MANAGEMENT

Unit supports different types of management (programming):

- Unit can be programmed remotely by using WEB server access.
Access it by EISWARE.com
- EISWARE APP on IPHONE or ANDROID
Must have data plan enabled to get data transfer on either platform.

8. EIS FUNCTIONS with PROGRAMMING INSTRUCTIONS

- Unit can be programmed with the use of EISWare, the web-based online browser interface.

IMPORTANT

The SIM card in the EIS-R unit MUST have a DATA PLAN to be able to use WEB programming!

8.1 WEB SERVER - LOG IN

Visit <https://www.eisware.com/> to access the web server.

Figure 2: WEB Server-Sign In page

EIS-R

User must first use the Sign In section to create working profile on the server. The profile can be created by using a social login like Facebook, Google account or Twitter. If user lacks any of the social profiles they can proceed to the Sign UP page using standard user name and password entry.

NOTE

Server supports the following browsers:
Firefox, Google Chrome, Safari.

8.2 WEB SERVER – ADDING UNITS TO USER PROFILE

The screenshot shows the 'DEVICE LIST (0)' page. At the top right, it says 'Logged in as user1'. Below this is a header bar with columns: NAME, IMEI, TYPE, PHONE NUMBER, SIM PROVIDER, LOCATION, and ACTIONS. The ACTIONS column contains a green circle with a white plus sign (+) and a magnifying glass icon. A red circle highlights the plus sign. Below the header, there is a 'No data' message.

Figure 3: WEB Server-Main page select ADD mode

After login the user will be diverted to Web server main window. This page is used to add/remove/search for EIS units from the user's profile.

Select “+” sign to select ADD EIS units to user's profile.

The screenshot shows the 'Device list' page. At the top right, it says 'Logged in as user1'. Below this is a header bar with columns: Name, IMEI, Phone number, GPS Settings, and Location. The first row of data shows 'EIS LCC', '35589400076291', '+10017350435', 'T-Mobile', and an empty location field. A red circle highlights a green circle with a white plus sign (+) in the bottom right corner of the table. Below the table, there is a 'Not found' message.

Figure 4: WEB Server-Main page adding EIS units

EIS-R

User then provides required data:

Mandatory Information:

- **Name:** Name for the added unit - mandatory information.
- **IMEI:** Identification number of the unit, can be found in the enclosure of the unit - mandatory information. The IMEI is located on the cellular chip and also should be on the card board box of the EIS.
- **Phone Number:** The telephone number of the SIM card in the EIS unit - mandatory data.

By clicking the “+” (insert sign) after filling mandatory data, the unit will be added to the user profile.

Optional Information:

Location: Notification field, used by the user to provide extra data for its own information

NOTE: First building of the unit data-base may take a few minutes. It will give you a dialog box.

8.3 WEB SERVER-UNIT MANAGEMENT

After the EIS unit is added to user database, the user can change the configuration of the specific unit.

All changes made by the user are listed in the Change Log window. By clicking Send to device button ALL changes are send to the unit. User can (revert) all changes made, before sending, by clicking (Revert all) or select particular entry and revert it.

EIS-R

The screenshot displays the 'Device' management interface. On the left, there are input fields for 'Name', 'Type' (set to 'EIS-1,EIS-2,EIS-4,EIS-R'), 'Imei' (357043080446829), 'Phone number', 'Location', and 'Apn' (T-Mobile). In the center, there are 'Export' and 'Import' buttons. On the right, the 'Device reported values' section shows: Type: SOLO HW-BG1, SOLO; Firmware: 3.0.2(OTA)(2017-11-07); Signal: 2(-95dBm); Network ID: 310260; Uptime: 0 days 1 hours; Last update: 17.01.2018 18:50:05. A 'Change log' panel on the far right has 'Send to device' and 'Revert all' buttons.

Below the device section is the 'Settings' area with various tabs: Intercom, Pin access, Caller id #, Outputs, Digital interface, Inputs, Temporary pin access, Administration, Misc, Timer, Event log, and System management. The 'General' tab is active, showing 'Tables control mode' set to 'Joint (WINF1 & WINF2 Control Table 1 & Table 2)' and 'Enable PIN notification function' set to 'Disabled'. It also features 'Table 1 output' and 'Table 2 output' dropdowns, both set to 'Output 1' and 'Output 2' respectively. Below these are two tables for PIN and User name configuration.

Position	PIN	User name
PIN1	0	
PIN2	0	

Position	PIN	User name
PIN501	0	
PIN502	0	

Figure 5: WEB Server-Unit management window

8.4 INTERCOM CONFIGURATION

The primary function of the EIS-R unit is intercom support. Placing a call is done by pressing the call button on the front of the EIS R.

This will start a voice call procedure from Phone number 1 through Phone number 5. After the call is answered the called user has the option to trigger the output by pressing “11” for opening Output 1 or “21” for triggering Output 2.

If the call is answered the unit will stop dialing next numbers on the list. Management of the intercom function is found under Intercom tab.

** To terminate the call press any button.

The screenshot shows the 'Intercom' settings tab. It includes a 'Call mode settings' section with buttons for 'Button 1' through 'Button 4'. Below these are fields for 'Telephone number 1' through 'Telephone number 5', each with a 'Tel. number' and 'Name' column. For example, 'Telephone number 1' is 0669750101 with the name 'demo'. Other fields include 'Delay before dialling next no. on the list' (25), 'Extension number' (0), 'Extension no. delay' (0), 'Work time start' (0), and 'Work time end' (0).

On the right, the 'General settings' section includes 'Line open time (off hook) [seconds]' set to 120. The 'Call point sound settings' section includes 'Microphone level' (25), 'Speaker level' (12), 'Ringing sound' (Playing), 'On activate input' (Play beep sound (buzzer)), and 'Support for Disabled people (audio feedback in seconds)' (0).

Figure 6: Web Server-Intercom settings

EIS-R

Intercom management parameters:

- **Telephone number 1...Telephone number 5:** Number that the unit will call when call button pressed.
- **Delay before dialing next no. on the list:** Time delay in second before next user on the list gets dialed if the call to the previous user is not answered.
- **Extension number:** Parameter is used to set the DTMF number in auto self-select function
- **Extension no. delay:** Parameter is used to set the delay (in sec.) for sending DTMF number in auto self-select function.
- **Work time start, Work time end:** Parameters are used to define work time schedule. Inside this limits number under position 1 to 4 will be dialed, outside this limits number under position 5 will be dialed.

Voice call setting

- **Microphone level:** Increasing the level will increase the sensitivity of the unit microphone decreasing will decrease the sensitivity.
- **Speaker level:** Increasing the level will increase the volume of the unit speaker, decreasing will decrease the level of the speaker.
- **Ringing sound:** By selecting Playing the unit will play the dial tone in the connection phase of the call, by selecting Muted the unit will not play any sound in the connection phase of the call.
- **On activate input:** By selecting Play beep sound (buzzer) the unit will provide audio feed back (buzzer BEEP) when the apartment entry is selected, by selected Muted unit will provide no audio feedback when the apartment entry is selected.

EIS-R

8.5 WIEGAND ACCESS

EIS unit has onboard support for 2 Wiegand output based device. With the use of external replicator more Wiegand devices can be connected to the unit.

Configuration of first Wiegand interface is found in Digital interface tab. First Wiegand interface can be found on board with a dedicated Wiegand connector and cables.

The screenshot shows the 'Settings' page of the web server. The 'Digital interface' tab is active. The 'Input' section has 'Mode' set to 2 and 'Facility code' set to Disabled. The 'Output' section has 'Wiegand type' set to W26, 'Data format' set to 0, 'Front parity' set to Even, 'Trailing parity' set to Odd, and 'Facility code' set to 0.

Figure 7: Web Server-First Wiegand interface support.

- **Mode:** Select appropriate data formatting (See advance settings section if needed, mode 2 is most common setting)
- **Facility code:** User can *Enable* or *Disable* facility code field.

NOTE

See Chapter 9-WIEGAND INPUT DATA FORMATS for detailed explanation of different data format options.

Second Wiegand interface is shared with alarm input lines, user must select Wiegand in **Input operation mode** found in the **Inputs** tab.

Additional settings for Wiegand interface input are found in **Wiegand input 2 configuration** sections.

The screenshot displays a web interface for configuring Wiegand devices. At the top, a navigation bar includes tabs for Intercom, Pin access, Caller id #, Outputs, Digital interface (selected), Inputs, Service button, Administration, Misc, Timer, Event log, and System management. Below the navigation bar, the interface is divided into three main sections:

- Wiegand input 1:** Contains a 'Mode' dropdown menu set to '2' and a 'Facility code' dropdown menu set to 'Disabled'.
- Wiegand input 2:** Contains a 'Mode' dropdown menu set to '2' and a 'Facility code' dropdown menu set to 'Disabled'.
- Wiegand output:** Contains several configuration options:
 - 'Wiegand type' dropdown menu set to 'W20'.
 - 'Data format' dropdown menu set to '0'.
 - 'Front parity' dropdown menu set to 'Even'.
 - 'Trailing parity' dropdown menu set to 'Odd'.
 - 'Facility code' text input field with the value '0'.

Figure 8: WEB Server-Wiegand interface support.

- **Mode:** Select appropriate data formatting (See advance settings section if needed, mode 2 is most common setting)
- **Facility code:** User can *Enable* or *Disable* facility code field.

Wiegand devices can be defined in two sections. First section is permanent pin codes and second is temporary pin codes - limited by the number of use.

NOTE

See Chapter 9-WIEGAND INPUT DATA FORMATS for detailed explanation of different data format options.

IMPORTANT

Unit **MUST** be restarted when switching between *Normal* and *Wiegand* mode in the **Input operation mode**.

Permanent use: devices are added in **Pin access** tables.

They are placed in two tables. For each table user can define which output they will trigger.

Device

Name: IOT Brads

Type: EIS-1,EIS-2,EIS-4,EIS-R

Figure 10: Web Server-Adding Wiegand devices for temporary use using **Extended PIN options** checkbox.

EIS-R

- **Extended PIN codes activate output:** Allows selection of the output that will be triggered in case of correct Extended PIN code.
- **Extended PIN entry:** For each extended PIN entry user needs to select appropriate values.

Extended PIN options	Description
Extended PIN value	Extended PIN code
User name	Name of the user
Notify	With Extended PIN code, administrator numbers CAN be notified
Counter limit	Enable/Disable counter limitation (consecutive use)
Timer limit	Enable/Disable timer limitation
Timer mode	Timer limit mode: Day limit (day limitation), Timer limit (hours of a day access limitation)
Rules valid on weekend	Enable/Disable timer limitation for weekend days
Counter	Number of allowed use of Extended PIN code
Timer start/Timer end	Bottom and Top timer limitation

Table 1: Web Server-Extended PIN entry parameters.

8.6 CALLER ID ACCESS

Caller ID access is a very simple way to control relay output defined in **Caller ID output** setting. User will by calling in the EIS unit trigger defined output.

Settings for this function are found in the **Caller id #** tab.

Figure 11: WEB Server-Caller ID Access

EIS-R

General Settings:

- **Caller ID Security Mode:** Defines how the system handles incoming calls for access control.
The user can select from three modes:
Caller ID Disabled – Deactivates the Caller ID function; no numbers are permitted.
Caller ID for Specific Users – Only phone numbers listed in the system are allowed to trigger outputs.
Caller ID Always ON – Any caller who knows the unit's number can trigger the output,
 - regardless of whether they are listed. Use this setting with caution.
- **Caller ID Output:** Specifies which output is activated when a valid call is received.

NOTE

Selection **Caller ID always ON** will allow anybody with the knowledge of the unit number to trigger the output by calling the unit. Use this setting with caution.

8.7 OUTPUTS SETTINGS

The behavior on the outputs is defined in the **Output tab**.

Settings

Intercom Pin access Caller id # **Outputs** Digital interface Inputs Temporary pin access Administration Misc Timer Event log System management

▼ Output 1

Output (relay) mode: Time pulse

Output pulse duration: 5

Output is: Normally open

▼ Output 2

Output (relay) mode: Time pulse

Output pulse duration: 5

Output is: Normally open

▼ Additional output settings

Voice active indication: Not used

Unauthorised call or SMS received: Not used

Button pressed indication: Not used

Input 1 activate output: Not used

Input 2 activate output: Not used

Figure 12: WEB Server-Output setting

EIS-R

Output 1 - Settings for output 1:

- **Output (Relay) Mode:** The user can select from three available options:
Disable – The output remains deactivated at all times.
Latching —Output is in latching mode. First Caller ID or PIN entry will activate the output, second Caller ID or PIN entry will deactivate the output.
Time Pulse –Output is time pulse mode. After output is triggered it will be activated for the time defined in **Output pulse duration**, after that time output will be restored.
- **Output pulse duration:** ON time for output in case of output mode *Timer pulse*.
- **Output is:** The output can operate in either normal or inverted (normally closed) mode.
Normally Open – In idle mode output pins are in open position.
Normally Closed – In idle mode output connection are closed.

Output 2 - Settings for output 2:

- **Output (relay) mode:** User can select between 3 options
Disable-Output is disabled
Latching-Output is in latching mode. First Caller ID or PIN entry will activate the output, second Caller ID or PIN entry will deactivate the output.
Time Pulse-Output is time pulse mode. After output is triggered it will be activated for the time defined in Output pulse duration, after that time output will be restored.
- **Output pulse duration:** ON time for output in case of output mode Timer pulse.
- **Output is:** Output can work in normal or inverted (normally close) mode. *Normally open*-In idle mode output pins are in open position.
Normally closed-In idle mode output connection are closed.

Additional output settings - Setting are used to link onboard actions with the outputs if needed:

- **Voice active indication:** When unit reaches voice connection (intercom call) output defined under this section gets activated.
- **Unauthorized call or SMS received:** If unauthorized call or SMS is received on the unit this event will activate output defined under this section.
- **Button pressed indication:** When intercom call button is pressed output defined under this section gets activated.
- **Input 1 activate output:** If input 1 is in alarm mode (**Input operation mode:** Normal mode selected) alarm input event on the input will activate output defined under this section.
- **Input 2 activate output:** If input 2 is in alarm mode (Input operation mode: Normal mode selected) alarm input event on the input will activate output defined under this section.

NOTE

Due to limitation of the outputs use additional outputs settings with care.

EIS-R

8.8 EIS WIEGAND OUTPUT INTEGRATION

EIS unit can be integrated into a bigger access system using a Wiegand interface. In this case numbers calling the unit will be transferred, over Wiegand interface, to access system.

The screenshot displays the 'Settings' window of the EIS-R unit. The 'Digital interface' tab is active, showing the 'Output' configuration section. The 'Input' section is collapsed. The 'Output' section includes the following settings:

- Wiegand type:** W26
- Data format:** 0
- Front parity:** Even
- Trailing parity:** Odd
- Facility code:** 0

Figure 13: WEB Server-Wiegand Output settings.

Configuration of the Wiegand output interface

- **Wiegand Type:** Type of the Wiegand used (W26 is most common setting)
- **Data format:** Format of data set on the selected Wiegand type.
- **Front parity, trailing parity:** Selection of the proper parity in selected Wiegand type.
- **Facility code:** Is required, user can define facility code to Wiegand data.

EIS-R

Timer settings:

- **Timer:** Parameter is used to enable and disable the timer function.
- **Mode:** User can select between day or week mode. In day mode the timer will control on the day table which is the same for all week. In week mode the user can define different setting for each day in the week.
- **Timer controls:** Output controlled by the timer function.
Output1 or Output2
- **Output mode:** Output mode management definition.

OUTPUT mode	Description
Master mode:	When the output is driven by the timer (output is activated by the timer) the outputs are in latching mode regardless of the setting in Output tab. When the output is not activated by the timer, the outputs are working by the defined settings in Output tab.
Slave mode	The behavior of the outputs (Time pulse or Latching mode) is defined in the Output tab.
Output precondition	In this mode Timer is used as PRECONDITION for output control used by other functions like PIN access or Called ID #.

Table 2: WEB Server-Timer setting, output mode options

- **Holidays:** With the definition of the holiday days (use day picker), user can define special behavior on the holiday days.

The described settings are the same for both timers.

EIS-R

8.10 ADMINISTRATION

Administration tab allows user to enable advanced settings like notification of unauthorized access, periodic test messages, lock down of the unit

Position	Phone number	User name	Input 1	Input 2	Periodic test	Low credit alert	Unauthorised call	Log full	Notify event
1	8018285058		☒	☒	☐	☐	☐	☐	☐
2			☐	☐	☐	☐	☐	☐	☐
3			☐	☐	☐	☐	☐	☐	☐
4			☐	☐	☐	☐	☐	☐	☐
5			☐	☐	☐	☐	☐	☐	☐

General settings

Administrator allowed to remote program by SMS: Anyone

Automatic call to administrator 1: 0 Period in days

Automatic periodic test SMS: 24 Period in hours

Test SMS start hour: 0

Figure 16: Web Server-Notification numbers

- **Phone number, User name:** Specifies the phone number and user name of the user designated to receive notification messages.
- **Input1, Input2:** If input lines 1 & 2 are defined in alarm mode (Input operation mode: Normal mode) and if alarm condition is meet, users with check boxes will receive alarm notification SMS.

Figure 19: Web Server-Input alarm configuration.

- **Periodic test:** User can receive periodic (keep-alive) SMS, tick the check box for the appropriate user. Timer period is defined under parameter Automatic periodic test SMS, it is definable in hours
- **Low credit alert:** In case of prepaid SIM card the unit can notify the user if the credit on the SIM card is low. To enable notification SMS tick the check box in corresponding position. Note that additional input in the Misc. tab is needed to fully enable credit checking function.

EIS-R

- **Unauthorized call:** In case of unauthorized call the unit can notify user. To enable notification SMS tick the check box in corresponding position.
- **Log full:** Administrator can receive a SMS when LOG event buffer gets at a critical full level.
- **Notify event:** Selection of administrators that will be notified if the notification event is enabled in Temporary pin access tab or Pin access tab.
- **Administration allowed to remote program by SMS:** By selection this option the user can “Lock down” the EIS unit, preventing any unauthorized user to change any configuration on the unit.
- **Automatic call to administrator 1:** To prevent SIM card provider to lock out the SIM card from the network, user can define a periodic call out to telephone number under position 1. Parameter is defined in days (It is not mandatory to set this parameter).
- **Automatic periodic test SMS:** Definition of Time Out for periodic SMS sending.
- **Test SMS start hour:** Periodic SMS, first send-out hour.

8.11 EVENT LOGGING

EIS unit itself supports a 20000 log event entry. These log events can be pulled up to the server by clicking **Read Log** button in the “Event Log” tab. Events are listed in the table.

General		Event type	Time	User	Output	Extra info	Deleted
Automatic log clearing:	Enabled	Caller id	07.11.2017 11:27:56	Ali	Output 1: ON		☐
Event logging:	ON - internal memory	Caller id	05.11.2017 13:45:28	Ali	Output 1: ON		☐
Automatic log retrieval [hours]:	0	PIN access	02.11.2017 16:33:25	Latch	Output 2: OFF		☐
Caller ID logging:	Enabled	PIN access	02.11.2017 16:25:37	Latch	Output 2: ON		☐
System logging:	Enabled	Caller id	31.10.2017 18:49:59	Krissy	Output 1: ON		☐
Alarm input logging:	Disabled	intercom	30.10.2017 18:49:44	Ali		8015563362	☐
PIN access logging:	Enabled	Caller id	29.10.2017	Ali	Output 1: ON		☐
Output events logging:	Enabled						

Read log Last log read: 08.11.2017 13:24:08

Figure 17: WEB Server-Log event

Each event is equipped with the event type, time, output if triggered and the user name of the user responsible for the event. If user names are available (Called ID #, PIN codes, Intercom user ...) user name will be shown in the user column.

EIS-R

- **Automatic Log Clearing** Behavior if the internal LOG buffer on the unit is FULL of events, unit can CLEAR events or STOP recording new events.
- **Event Logging** User can select between, not logging, logging to internal memory (unit) or optional sending events over units USB connection to the external PC.
- **Automatic Log Retrieval** Definition of Time Out period for unit to upload LOG events to the WEB server.
- **Caller ID Logging** Enable/Disable logging of the Caller ID # events.
- **System logging:** Enable/Disable logging of special system evens.
- **Alarm input logging:** Enable/Disable logging for input alarm events.
- **Pin access logging:** Enable/Disable of the Pin access and Temporary pin access events.
- **Output events logging:** Enable/Disable of the events triggering the outputs (Timer, Intercom, ...)

NOTE

After events are read and stored to the server, the local copy on the unit gets deleted.

8.12 MISCELLANEOUS

This tab is split into 2 sections.

EIS-R

8.13 PIN ACCESS NOTIFICATION FUNCTION

This function is used to notify administrator when a selected pin code is being used. Notification is done by SMS send to the selected administrator numbers.

Global enabling of the notification function is done in 2. Steps:

STEP 1: User has to select **Enable** option in the **Enable Pin Notification function**.

STEP 2: Send the configuration to the device!!

This procedure is ONLY done 1 time when enabling this function.

- **SMS text Language:** define the language of the SMS information send out. User can select appropriate language in drop-down menu.
- **Automatic GSM module restart interval:** User can select GSM module restart interval (hours) if needed (Not advisable to use this parameter if not advised otherwise).
- **Self-updating clock:** Parameter is used to allow unit to synchronize to real time. To have the correct time along in log event it is advisable to enable this function.

The screenshot displays the Transmitter Solutions web interface. The top section is labeled 'Device' and contains fields for Name, Type, IMEI, Phone number, Location, and App. To the right of these fields are buttons for 'Device maintenance', 'Export', and 'Import'. Below the 'Device' section is the 'Settings' section, which includes a 'Change log' button and a 'Pin access / General' tab. Under the 'General' tab, there is a 'Tables control mode' dropdown set to 'Joint (WINF1 & WINF2 Control Table 1 & Table 2)'. Below this is the 'Enable PIN notification function' dropdown, which is set to 'Enabled'. At the bottom, there are two tables for 'Table 1 output' and 'Table 2 output'. Each table has columns for Position, PIN, User name, and Notify. The 'Notify' column has checkboxes for PIN1 0 and PIN2 0.

Figure 19: WEB Server-Global enabling of the notification function.

After the notification function is enabled, user can select which pin code will send the notification SMS. This is done by placing a tick in the check box of the pin code notify field.

EIS-R

The last step is selecting a number that will be receiving the notification SMS. Selecting is done in the **Administration** tab. In the **Notify PIN** column put a tick in the check box for the appropriate phone number, multiple choices are possible.

Position	Phone number	User name	Input 1	Input 2	Periodic test	Low credit alert	Unauthorised call	Log full	Notify event	
1	8018285058		☒	☒	☐	☐	☐	☐	☐	
2			☐	☐	☐	☐	☐	☐	☐	
3			☐	☐	☐	☐	☐	☐	☐	
4			☐	☐	☐	☐	☐	☐	☐	
5			☐	☐	☐	☐	☐	☐	☐	

▼ General settings

Administrator allowed to remote program by SMS: Anyone ▼

Automatic call to administrator 1: 0 ▼ Period in days

Automatic periodic test SMS: 24 ▼ Period in hours

Test SMS start hour: 0 ▼

9 WIEGAND INPUT DATA FORMATS

EIS units support standard Wiegand interface, it will work with Wiegand 26-bit and Wiegand 30-bit protocol. On each Wiegand protocol EIS unit support 4 different data formats, they all can be selected through all possible management systems.

Selecting the appropriate data format for FIRST Wiegand interface is done by connecting the WEB server, selecting the **Digital interface** and in **Input** section selecting proper **Mode** option.

▼ Settings

Intercom Pin access Caller id # Outputs **Digital interface** Inputs Temporary pin access Administration Misc Timer Event log System management

▼ Input

Mode: 2 ▼

Facility code: Disabled ▼

▼ Output

Wiegand type: W26 ▼

Data format: 0 ▼

Front parity: Even ▼

Trailing parity: Odd ▼

Facility code: 0 ▼

Figure 21: WEB Server-First Wiegand interface support.

Selecting the appropriate data format for SECOND Wiegand interface is done by connecting to the WEB server, selecting the **Input** tab and in **Wiegand input 2 configuration** section selecting proper **Mode** option.

The screenshot displays the 'Settings' page of a web interface. The 'Inputs' tab is selected among several other tabs like 'Intercom', 'Pin access', and 'Outputs'. Under the 'Inputs' tab, there are three main sections: 'Input operation', 'Inputs configuration', and 'Outgoing SMS identification labels'. The 'Input operation' section shows 'Input operation mode' set to 'Normal'. The 'Inputs configuration' section includes 'Caller ID enabled by input' (set to 'Inputs not used by caller ID'), 'Input 1 mode' (set to 'Normally open - negative triggered'), 'Input 1 time delay before sending SMS (seconds)' (set to 0), 'Input 2 mode' (set to 'Normally open - negative triggered'), and 'Input 2 time delay before sending SMS (seconds)' (set to 0). The 'Outgoing SMS identification labels' section shows 'Location identification' (User Location), 'Input 1 identification' (Input 1), and 'Input 2 identification' (Input 2). At the bottom, there is a link to 'Wiegand input 2 configuration'.

TRANSMITTER SOLUTIONS WARRANTY

The warranty period of this Transmitter Solutions product is twenty-four (24) months. This warranty shall begin on the date the product is manufactured. During the warranty period, the product will be repaired or replaced (at the sole discretion of Transmitter Solutions) if the product does not operate correctly due to a defective component. This warranty does not extend to (a) the product case, which can be damaged by conditions outside the control of Transmitter Solutions, or (b) battery life of the product. This warranty is further limited by the following disclaimer of warranty and liability:

EXCEPT AS SET FORTH ABOVE, TRANSMITTER SOLUTIONS MAKES NO WARRANTIES REGARDING THE GOODS, EXPRESS OR IMPLIED, INCLUDING WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE. BUYER MAKES NO RELIANCE ON ANY REPRESENTATION OF TRANSMITTER SOLUTIONS, EXPRESS OR IMPLIED, WITH REGARD TO THE GOODS AND ACCEPTS THEM "AS-IS/WHERE-IS". TRANSMITTER SOLUTIONS SELLS THE GOODS TO BUYER ON CONDITION THAT TRANSMITTER SOLUTIONS WILL HAVE NO LIABILITY OF ANY KIND AS A RESULT OF THE SALE. BUYER AGREES THAT TRANSMITTER SOLUTIONS SHALL HAVE NO LIABILITY FOR DAMAGES OF ANY KIND, WHETHER DIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, INCLUDING INJURIES TO PERSONS OR PROPERTY, TO BUYER, ITS EMPLOYEES OR AGENTS. AS A RESULT OF THE SALE. BUYER ALSO AGREES TO HOLD TRANSMITTER SOLUTIONS HARMLESS FROM ANY CLAIMS BUYER, OR ANY THIRD PARTY, MAY HAVE AS A RESULT OF BUYER'S USE OR DISPOSAL OF THE GOODS. BUYER HAS READ THIS DISCLAIMER AND AGREES WITH ITS TERMS IN CONSIDERATION OF RECEIVING THE GOODS.
